Steve Behm
CKC Laboratories, Inc.
5046 Sierra Pines Drive
Mariposa CA 95338
United States

Dear Mr. Behm:

Pursuant to a request from the BSMI and as illustrated via email from NIST, we are writing to confirm your laboratory's technical capabilities related to your current A2LA Accreditations. As requested by the BSMI, please retain a copy of this letter to be included with your laboratory's test reports for acceptance by the BSMI reviewers.

For the purposes of the BSMI's review, A2LA confirms that your Accredited Testing Laboratories, "CKC Laboratories, Inc.", with four separate locations in Mariposa, CA, Brea, CA, Bothell, WA and Fremont, CA (United States), all have the capability and competence to perform testing according to CNS 13438:2006 for radiated emissions testing "up to 6GHz", and are also capable and competent for testing conducted emissions for mains and telecom ports, as was determined by your lab's A2LA technical assessor.

A2LA has accredited your testing laboratories to perform the testing listed on the A2LA Scopes and Certificates of Accreditation numbered 0803.01, 0803.02, 0803.05 and 0803.06 (available on the A2LA website at www.A2LA.org). Accreditation was granted to these laboratories based upon the outcome of your most recent A2LA assessments, and the subsequent corrective action response(s) provided. Your laboratory's management system and technical capabilities were assessed to the requirements spelled out in ISO/IEC 17025:2005, A2LA's local policies and procedures, and the test methods listed on your current Scopes of Accreditation.

If you require additional information in support of this letter, please do not hesitate to contact us.

Sincerely,

Adam Gouker
Program Manager, EMC
